PROFILE

SAP BTP engineer with 4 years of experience delivering production enterprise applications in consulting and in-house roles. Primary technical contact for approximately 25 SAP BTP applications/repositories at Wienerberger, from requirements and solution design through implementation, demos and production support. Strong in CAP Node.js, SAPUI5/Fiori, OData, Cloud Foundry and SAP Sales Cloud integrations, with a growing focus on solution architecture and AI-enabled enterprise software.

EXPERIENCE

SAP BTP Full-Stack Developer

Oct 2025 – Present

Wienerberger · Vienna, Austria

- **Own day-to-day technical responsibility** as the primary contact for ~25 SAP BTP applications/repositories, investigating requirements and incidents, proposing technical approaches, implementing solutions and guiding colleagues.
- **Led the BTP design and implementation of an external company-register onboarding solution** (SAPUI5, CAP Node.js, SAP Sales Cloud), in production since March 2026. Introduced a provider/adaptor boundary so additional country registries can be supported through a new adaptor and configuration while keeping the UI and service contract stable. [Case study](#)
- **Designed and delivered a production self-service explanation tool** for territory/employee determination, giving key users visibility into assignment decisions that previously required developer investigation. It reuses the established rule logic and exposes decision steps and candidates through a CAP API and SAPUI5 interface. [Case study](#)
- **Improve production reliability and operations** across integrations and background processing through root-cause analysis, recovery/error-handling improvements, monitoring/alerts and BTP memory right-sizing.
- **Work directly with key users and business stakeholders** in technical refinements, effort estimation, requirements discussions and solution demos; transfer BTP knowledge to colleagues and follow SAP support cases when required.

SAP BTP Full-Stack Developer

Sep 2022 – Sep 2025

Stratesys · Lisbon, Portugal · Hybrid

- **Delivered SAP BTP applications and extensions as a consultant** for client and internal product work (CAP Node.js, SAPUI5/Fiori, OData, integrations), working directly with client and functional stakeholders from requirements to support.
- **Cellnex (telecommunications):** built and maintained CAP services and UI5 features on a provisioning platform, automated recurring data tasks with Python/SQL, and handled production support in a client-facing environment.
- **Contributed to Pyxis, a multi-tenant treasury application**, implementing CAP OData services, XSUAA-secured functionality and Fiori Elements/UI5 experiences integrating enterprise finance data with BTP.

SELECTED PROJECT

SayMacros · Independent product, pre-launch [Case study](#)

2026 – Present

- **Voice-first macro tracker:** spoken or typed meal → AI extraction → nutrition validation/estimation → user confirmation.
- Next.js/React/TypeScript, OpenAI transcription and structured extraction, USDA and Open Food Facts lookups, Supabase Postgres with row-level security, Google OAuth and offline-first state; unit and Playwright E2E tests in GitHub Actions CI.

TECHNICAL CAPABILITIES

Production	SAP BTP, Cloud Foundry, CAP Node.js, SAPUI5/Fiori, OData/REST, SAP Sales Cloud/C4C integration, BTP Destinations, JavaScript/TypeScript, Node.js, SQL/PostgreSQL
Working	Fiori Elements, XSUAA/OAuth, background jobs and event processing, Next.js/React, Supabase, OpenAI APIs, Playwright, GitHub Actions, Jenkins, SonarQube, Docker, Python
Exposure	S/4HANA integration, Integration Suite/CPI, SAP Build
